## **DETAILED ACTION**

### **Examiner's Amendment**

1. An examiner's amendment to the record appears below. Should the changes and /or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.3.12. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

2. The following claim has been amended upon agreement by applicant during a telephone conversation with Mr. Ebenesar Thomas on 12/05/2008. Amendments to claims 5, 21, and 22; and cancelled claims 11-14:

#### **Claim 5 (Currently Amended):**

A computer-implemented method for directing a database server to selectively release database system resources associated with a database system operatively coupled with the database server, the database server accessible by applications, the method comprising:

receiving an online protocol indicator from an application, wherein the online protocol indicator comprises adding a pre-defined keyword to a database statement included in a request sent by the application to the database server,

returning a defined error condition indicator to the application when the application has forwarded the online protocol indicator and when identified system resources are determined to be scarce, and

Art Unit: 2163

receiving a commit statement from the application when a response from the database server is determined to comprise the defined error condition indicator, wherein the application is a multi-transactional application;

the defined error condition indicator is returned to the application if at least one of a lock list and an active log space is full;

the database server interrogates the active log to determine if the active log is full and interrogates the lock list to determine if the lock list is full; and

the application issues the commit at any time without changing a logic of the application while the application has forwarded the online protocol indicator.

Claim 11 (Cancelled)

Claim 12 (Cancelled)

Claim 13 (Cancelled)

Claim 14 (Cancelled)

Claim 21 (Currently Amended)

A computer-implemented method for directing a database server to selectively release database system resources associated with a database system operatively coupled with the database server, the database server accessible by applications, the method comprising:

Art Unit: 2163

receiving a request at the database server to set up an online flag, if an application level online flag is used;

preparing and executing a structured querying language (SQL) statement with an online indicator if a statement level online indicator is used;

monitoring responses from the database server by the application to check if an error is returned;

determining the type of error returned;

executing a commit if the error returned is a log full error or if the error is not a log full error and the error is a lock list full error; and

executing a rollback if the error is an SQL error.

#### Claim 22 (Currently Amended)

A computer-implemented method for directing a database server to selectively release database system resources associated with a database system operatively coupled with the database server, the database server accessible by applications, the method comprising:

receiving a request at the database server to perform Structured Querying Language (SQL) processing from an application;

determining if an active log is full;

determining if lock list is full, if the active log is not full;

determining if an online protocol is set, if the active log is determined to be full or the lock list is determined to be full;

Art Unit: 2163

returning a log full error or lock full error to the requesting application if the online protocol is set; and

receiving a commit statement from the application when a response from the database server is determined to comprise the log full error or lock full error.

The Examiner's amendment has been made in order to place the application in a condition for allowance.

### **Reasons for Allowance**

3. The following is an examiner's statement of reason for allowance:

Claims 5, and 21-22 are considered allowable since the prior made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Sadjadi (U.S. 6,850,938) or McDaniel (U.S. 6,175,732) or Aigen (U.S. 2003/0233632), taken individually or in combination, do not teach the claimed invention having a computer-implemented method for directing a database server to selectively release database system resources associated with a database system operatively coupled with the database server, the database server accessible by applications, the method comprising: returning a defined error condition indicator to the application when the application has forwarded the online protocol indicator and when identified system resources are determined to be scarce, and receiving a commit statement from the application when a response from the database server is determined to comprise the defined error condition indicator, wherein the application is a multi-transactional

Art Unit: 2163

application; the defined error condition indicator is returned to the application if at least one of a lock list and an active log space is full; the database server interrogates the active log to determine if the active log is full and interrogates the lock list to determine if the lock list is full; and the application issues the commit at any time without changing a logic of the application while the application has forwarded the online protocol indicator with a combination of all recitations as defined in claims 5, and 21-22.

Therefore, claims 5, and 15-22 *are* presently allowed.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2163
